TENTZU

PRE-LAUNCH IMPROVEMENT FEEDBACK

For IT Team – Final Review Before Launch

Purpose: The app has a good foundation. Before launch, the main focus should be on making the existing features stable, simple and reliable, especially the lease, payment and reminder functions.

1. Onboarding & User Registration

- Keep the onboarding short and easy for a first-time user.
- Only ask for information that is necessary at registration.
- Make required fields clear and allow users to go back and edit information.
- Check that OTP, login and password recovery work properly.

2. Lease / Tenancy Setup

- Make adding a lease simple and easy to follow.
- Check lease start date, expiry date and payment dates carefully.
- Users should be able to view, replace or delete uploaded documents.
- Show a clear confirmation after a lease is successfully added.

3. Cheque / Payment Schedule — HIGH PRIORITY

- The amount, due date, payment number and payment status must always be correct.
- Prevent duplicate payments or duplicate entries.
- Allow users to correct information if something was entered incorrectly.
- Use clear statuses: Paid, Upcoming, Due Today and Overdue.

4. Reminders & Notifications — HIGH PRIORITY

- Test all scheduled reminders, including 30-day, 7-day and 1-day reminders.
- Reminders must be sent on the correct date and time.
- Once a payment is marked Paid, related reminders should stop.
- Tapping a notification should open the correct lease or payment.
- Make sure notifications do not appear twice.

5. Dashboard & Ease of Use

- The home screen should immediately show the next payment, due date and lease status.
- Users should not need to open several pages to find important information.
- Keep buttons, icons, fonts, colours and page layouts consistent.
- Make important actions obvious and easy to find.

6. Error Messages & Internet Connection

- Replace technical error messages with simple instructions.
- Show a clear loading indicator when the app is processing something.
- Test slow internet, no internet and internet interruption while saving.
- Prevent users from submitting the same information multiple times.

7. Documents & Data Security

- Test small and large document uploads.
- Users should know when a document has uploaded successfully.
- Documents and personal information must be protected.
- One user must never be able to access another user's information.
- Check logout, password reset and account access security.

8. Subscription / Paid Features

- Clearly show which features are free and which require payment.
- Show the subscription price and billing period clearly.

- Test successful payment, failed payment and cancellation.
- Users should be able to see their current plan.

9. Final Device & UAT Testing

- Test different Android versions and screen sizes.
- Check keyboard behaviour, scrolling, pop-ups and buttons.
- Test the complete journey as a new user without developer assistance.
- Test: Register → Login → Add Lease → Upload Contract → Payment Schedule → Reminder → Mark Paid.
- Do a final crash, performance and security check before launch.

PRE-LAUNCH PRIORITY

- Must be 100% reliable: payment calculations, due dates, reminders, notifications, login/security and user data.
- Do not add many new features at this stage. Fix and test the existing core functions first.
- Complete one full User Acceptance Testing (UAT) cycle using real-life scenarios before going live.
