Tentzu App — UI/UX Review & Feedback

I've reviewed the current Tentzu app experience and noted the following UI/UX and copy improvements that should be addressed.

1. Overall UI & Typography

- The text and some interface elements currently feel too large.
- Please reduce the text size where appropriate and review the spacing and visual hierarchy to create a cleaner, more polished mobile experience.

2. Payment Reminder Screen

Current copy

> "I'll nudge you 30, 7 and 1 day before every payment. In-app is free and always there — the rest come with a paid plan."

Recommended copy

> **"Get reminders 30, 7, and 1 day before each payment is due. Payment reminders are free; additional features are available with a paid plan."**

This version is shorter, clearer, and easier to understand at a glance.

Recommended headline

> **Never Miss a Payment**

This is more direct and user-focused than the current headline.

CTA / Flow

Please review the **Continue** and **Skip for Now** buttons.

When the user chooses to skip this step, **"Skip for Now" should be the only relevant action**. Having both actions presented together can make the flow feel unnecessarily complicated.

The goal is to make the decision clear and reduce friction.

3. Onboarding — Page 11

Please restructure the copy on Page 11.

The text should be:

- Shorter and easier to scan.
- More concise and user-friendly.
- Better structured with a clear headline and supporting text.
- Consistent in tone with the rest of the onboarding experience.

4. Onboarding — Page 12

Please also restructure the copy on Page 12.

The current text should be simplified to make the information easier to understand without requiring the user to read too much.

The onboarding screens should communicate **one clear message at a time**.

5. Onboarding — Page 14

Phone Number

Please move the **country code** to the side of the phone-number input field so that the country code and phone number are clearly separated.

Password Fields

Please add a **Show/Hide Password** option to the password field.

Also add the same **Show/Hide Password** option to the **Confirm Password** field.

This will make it easier for users to verify what they have entered and reduce password-entry errors.

6. “Marked as Paid” — Undo Option

When a user marks a payment as **Paid**, there should be an option to reverse the action in case it was done accidentally.

Recommended confirmation message

Payment marked as paid.

Recommended action

Undo

Using **Undo** is preferable to “Reverse” because it is simpler and immediately understandable.
