Tentzu — Accounts Needed for Launch

Third-party services the company must open, and what still blocks release

13 September 2026 · Tentzu mobile app (iOS + Android) and backend API

The app is feature-complete. What stands between it and paying users is mostly **commercial accounts only the company can open** — several with approval waits of weeks.

> **Start these three today:** Apple Developer, WhatsApp Business and Stripe. All three wait on third-party verification. Nothing we build shortens those queues, and the launch date is set by them.

Accounts to open

Service	Priority	Unlocks	Cost	Register at
Apple Developer	Blocker	All iOS distribution, TestFlight, push	USD 99 / year	`developer.apple.com/programs/enroll/` Company account needs a D-U-N-S number (1–2 weeks): `developer.apple.com/support/D-U-N-S/`
WhatsApp Business Meta	Blocker	WhatsApp reminders — the headline feature	Per message	`business.facebook.com` Longest wait: verification, then separate template approval
Stripe	Blocker	Taking payment, paid tiers	Per transaction	`dashboard.stripe.com/register` Needs entity, bank account, ID
Google Play	Blocker	All Android distribution	USD 25 once	`play.google.com/console/signup`
Twilio	High	SMS reminders; hosts the WhatsApp sender	Per message + number	`twilio.com/try-twilio`
Resend	High	Verification codes, password reset, email reminders	Free to 3,000/mo	`resend.com/signup` Company account, not personal
Firebase Google Cloud	High	**Android push notifications.** Google owns Android delivery — there is no alternative	Free at our scale	`console.firebase.google.com`
Document storage	High	Tenancy contracts that survive a deployment	See below	`dash.cloudflare.com/sign-up` (R2) `hostinger.com/vps-hosting` (VPS)
Hosting	High	The API and database	Approx. USD 20–30/mo	`hostinger.com/vps-hosting` Currently on Render; moving to Hostinger under review
Anthropic	Planned	AI assistant that registers a lease by conversation	Usage-based	`console.anthropic.com` Only when that feature ships
Expo / EAS	Have it	Building the app binaries	Free tier	`expo.dev` — account exists

Costs are indicative; confirm at sign-up. Per-message and per-transaction pricing varies by country.

Two notes on choices

Document storage — two options. Users upload tenancy contracts; today they are written to the server's own disk and erased on every deployment.

- **Cloudflare R2** — free tier, and no charge for downloads. Storage stays independent of the server, so rebuilding or moving the server cannot lose documents. Recommended.
- **Hostinger VPS disk** — included with the VPS at no extra cost, but the contracts then exist in one place only and backups become our responsibility. These are legal documents a tenant may need years later.

Google sign-in is optional; Firebase is not. Firebase is required for Android push and has no substitute. "Sign in with Google" is a separate, optional choice — and if we skip it, Apple's rules no longer oblige us to add "Sign in with Apple" either, removing work from both platforms.

Still to finish — no account needed

Item		Why
Privacy Policy & Terms of Service	Blocker	Apple and Google both refuse submission without a public privacy policy. Neither exists yet
Documents moved off local disk	Blocker	Uploaded contracts are lost on every deployment
Hosting off the free tier	Blocker	First request after idle takes ~70 seconds; testers will call the app broken
Full UAT cycle	Blocker	QA gated launch on one complete pass. Cannot start until builds reach testers
Real Stripe prices	High	Checkout fails today — the prices are placeholders
Push delivery	High	The app collects a device token; nothing stores it or sends to it
Sign-in buttons	High	Apple and Google both show "Coming soon"
Duplicate-payment prevention Notification deep-linking	Medium	Both raised in the QA review and still open

What the company needs to supply

The same details recur across sign-ups — gathering them once avoids repeated delays:

- Legal entity name, trade licence, registered address
- D-U-N-S number for the entity, or an application started
- Business bank account for Stripe payouts
- Identity documents for the authorised signatory
- Confirmed public pricing for the Starter and Pro tiers
- **A company email address to own every account** — not a personal one. Accounts opened on personal addresses cannot be transferred later, and are a common way businesses lose control of their own app store listing and payment processor.
